

Telugu Document Template in L^AT_EX

vkirank (vkirank.com)

July 30, 2021

1 Introduction

This is a sample document containing both Telugu and English text. Getting the Telugu language to work with L^AT_EX is difficult, so I've uploaded this sample document (along with its source code) onto Github. Feel free to use it as a template for whatever you want.

2 Compiling Telugu Documents

To get Telugu to work with L^AT_EX, you need to compile your .tex documents using XeLaTeX. **Do NOT compile this file using pdf_latex!!!** It won't work properly. To compile this .tex file, you should run the following command:

```
xelatex telugutest.tex
```

3 Sample Telugu Text

ఆదియందు దేవుడు భూమ్యాకాశములను సృజించెను. భూమి నిరాకారముగాను శూన్యముగాను ఉండెను; చీకటి అగాధ జలము పైన కమ్మియుండెను; దేవుని ఆత్మ జలములపైన అల్లాడుచుండెను. (<https://www.sajeevavahini.com/telugubible/>)
